A-301-150 Satellite Radio Combiner

- Enables simultaneous transmission and reception of two military UHF satellite radio channels operating in the 243 – 318 MHz SATCOM band on a single antenna.
- Ideal for SATCOM on the move where limited antenna availability may hinder operations (maritime surface craft, vehicles, aircraft, and submarines).
- Incorporates extensive transmit and receive filtering to ensure no performance degradation in either channel during simultaneous transmit and receive.
